

Spacing fingerprint: facilitator key

Keep this sheet with you. Give participants only the two-page handout PDF.

Print and distribute

Print the handouts single-sided on A4, at Actual size / 100%. Each PDF page already contains two emails; do not select two pages per sheet.

Cut along the centre line. Print extra sets as needed. All four emails have the same wording, date, headers and line breaks. There are no visible version labels.

First ask whether anyone can spot a difference. Then ask neighbouring participants to compare copies. Recover the pattern before showing this key.

How to read the mark

Read the eight gaps below in order: 0 = one space; 1 = two spaces. Use the first two sentence boundaries inside each of the four body paragraphs. Every marked gap stays within a printed line.

Copy	Print location	Gap pattern (1 to 8)
A	Page 1, top half	0 0 1 1 0 0 1 1
B	Page 1, bottom half	0 1 0 1 0 1 0 1
C	Page 2, top half	1 0 1 0 1 0 1 0
D	Page 2, bottom half	1 1 0 0 1 1 0 0

Where to look

- | | |
|----------------|----------------------------|
| 1. Paragraph 1 | office. [gap] The |
| 2. Paragraph 1 | workspace. [gap] It |
| 3. Paragraph 2 | support. [gap] Invitations |
| 4. Paragraph 2 | checklist. [gap] Please |
| 5. Paragraph 3 | release. [gap] The |
| 6. Paragraph 3 | record. [gap] If |
| 7. Paragraph 4 | own. [gap] We |
| 8. Paragraph 4 | pilot. [gap] Bring |

Reveal

The words never changed. The spacing identifies which version someone received. Each pair of versions differs at four or more marked gaps, so compare the complete pattern rather than trusting one gap.

Normalising every sentence gap to one space removes this mark. This is a fragile copy fingerprint, not proof of who leaked a page or whether AI wrote it.

The email, company, people and launch are fictional workshop material. They are not a real Tesla email. Print one test sheet before making the full batch.
